

LANDesk® Management Suite 8.7

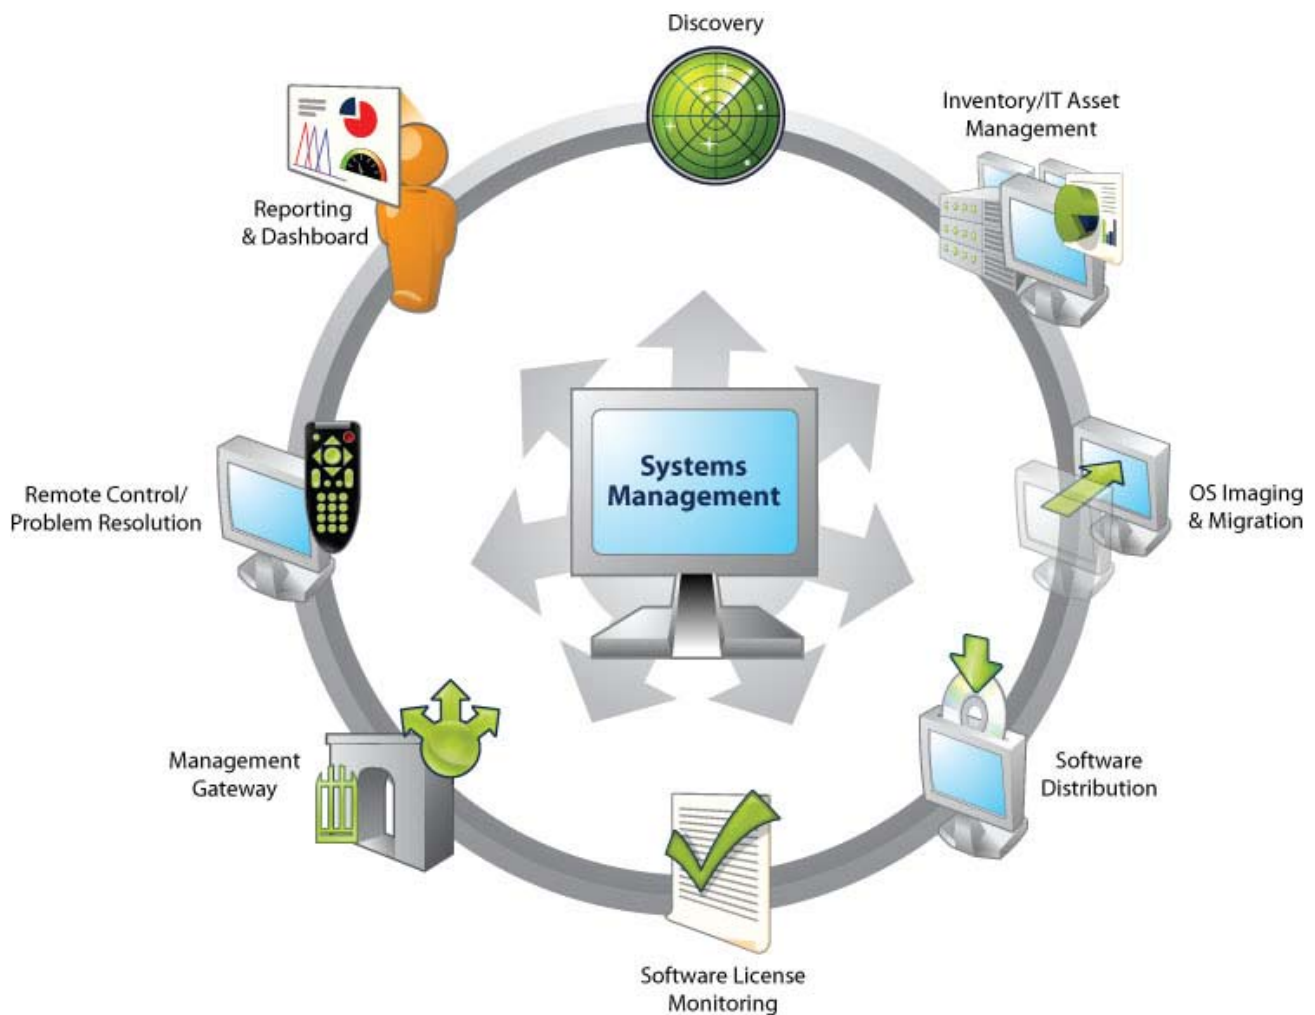

»»
LANDesk®

See, Manage, Update, Protect

See, Manage, Update and Protect All the Devices in Your Network Environment from a Single Console

»»» A Single Console for Proactively Protecting, Seeing, Managing, Updating and Protecting Enterprise IT Systems

“LANDesk® Management Suite is an invaluable tool to us. We save a lot of time and transport costs, and at the same time we have been able to assist the users much better than before. LANDesk has improved the image of the IT department both in the management team and among the employees.”

TORBEN CHRISTENSEN
IT MANAGER
EUROFINS

Your enterprise is faced with the business pain of maintaining security and compliance while keeping pace with regulatory and technological changes. Your IT staff must constantly manage new security threats and patches, updates and innovations. And your business' success depends on their ability to establish and maintain control in the face of constant change.

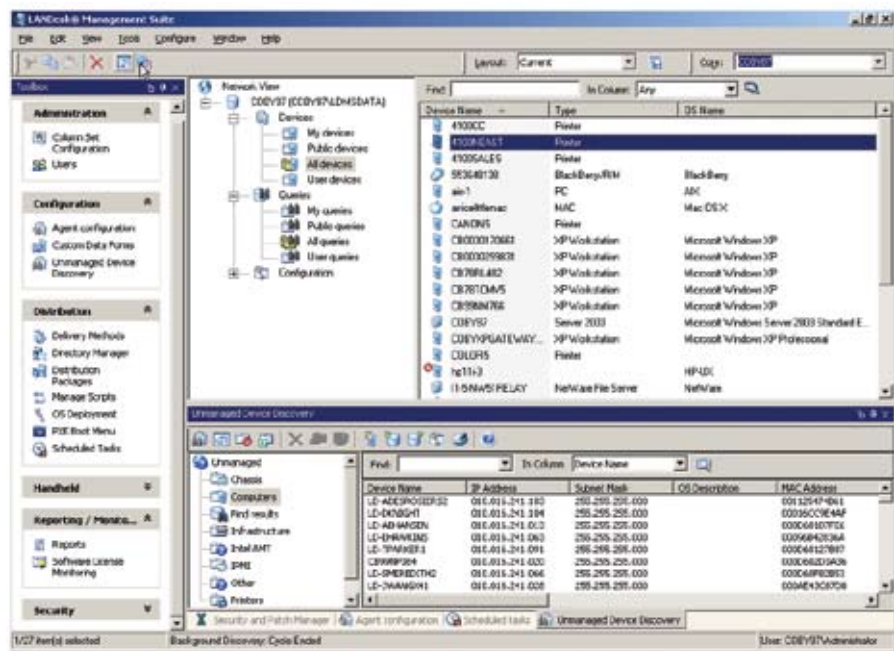

LANDesk® Management Suite: Relief in a Single Console

LANDesk® Management Suite lets your IT staff automate systems management tasks. No management solution is more complete, more integrated or easier to use, regardless of whether your systems are inside or outside the corporate firewall, or at one location or many.

LANDesk Management Suite helps:

- Increase efficiency and save time with a complete hardware and software management solution for all the systems and users in your complex network environment.
- Reduce costs and the demands on help desk resources with tools that help you securely and easily support users in any networked environment.
- Protect user productivity and reduce resource needs by easily keeping up with patches and updates and maintaining system-level security.
- Save time and network bandwidth with patented, ultraefficient and fault-tolerant software distribution technologies.
- Decrease software licensing costs and quickly respond to audits with comprehensive software license monitoring capabilities.
- Increase efficiency and save time by easily migrating users and their profiles to new operating systems.

LANDesk Management Suite lets you do all this while leveraging your existing investments in database, application and directory service technologies. And it works across heterogeneous IT environments for minimal impact on your network, servers and personnel.

With LANDesk® Management Suite, easily discover the computer assets you have, how they're configured and where they are on your network—whether they're managed or not and whether or not they have a firewall enabled.

Increase Efficiency and Save Time

LANDesk® Management Suite helps you increase efficiency and save time by giving you anytime, anywhere control over the desktops, notebooks, servers and mobile devices in your networked environment. Easily discover the computer assets you have, how they're configured and where they are on your network—whether they're managed or not and whether or not they have a firewall enabled. Even securely discover and manage systems outside the corporate firewall and at distributed sites with LANDesk® Management Gateway and an Internet connection—no VPN required.

Advanced management technologies give you the capabilities you need to take control of each system's configuration, standardize it and maintain it easily, efficiently and automatically.

A fully customizable console lets your IT team create task-optimized views and limit access to console features based on user's roles. You can even integrate with Active Directory to assign roles. Administrative users get rights only to what they need, so everyone wastes less time, is more efficient and overall security and efficiency is maximized.

Exclusive technologies—LANDesk® Dynamic Preferred Server, LANDesk® Targeted Multicast™ technology and LANDesk® Peer Download™ technology—give your enterprise the power to rapidly and efficiently deploy packages, software and operating systems. Policy-based maintenance with minimal network impact simplifies and speeds up deployments while eliminating much of the need for dedicated hardware or specialized configurations. And LANDesk Dynamic Preferred Server provides functional load balancing and fault tolerance for enterprise package distribution that eases the burden of distributing packages to users that move from location to location—you're empowered to quickly and easily keep up with users no matter where they are or how often they move around.

Intelligent, Efficient Management of Growth

LANDesk® Management Suite lets you scale your systems management solution to meet the needs of your enterprise today and in the future. So regardless of how many users and sites you manage, you remain efficient and cost-effective.

With LANDesk Management Suite, your IT team can centrally manage tasks across your enterprise. Rather than creating the same task over and over on multiple servers that manage different users or groups of users, your IT team can simply create the task once on a central rollup server. The LANDesk® Global Scheduler automatically knows which systems belong to which servers and rolls out needed tasks to the necessary servers. Status is then reported back to the rollup server so your administrator maintains complete visibility of progress without taking a step.

Public queries, packages and delivery methods are all controlled and replicated at one location from one server. And scheduled tasks and packages are easily grouped in the console to make the task of managing hundreds of different items simple and effective. And when your users are moving from location to location, LANDesk® Dynamic Preferred Server automatically selects the easiest, most efficient way to deliver packages to each user.

LANDesk Management Suite is also built to support Window PE (the standard for deployment of the upcoming Microsoft Vista) and Linux PE, so you can receive 32-bit performance for up to three times the speed of DOS-based imaging. You can even purchase your Windows PE licenses directly from LANDesk.

Management for growth and for existing distributed enterprise networks doesn't get easier or more efficient than that.

“With LANDesk® Management Suite, inventory is automatically updated daily. The cost savings of that feature alone have saved us thousands of dollars. We are able to manage our licenses better and compliance is no longer an issue.”

ANTHONY COCCO
MANAGER OF IT OPERATIONS
NORTH PENN SCHOOL DISTRICT

“It is an elegant solution that required a modest effort to build and saves us about eight hours work for each software distribution we do. Achieving anything that even remotely resembles this in Windows only would take us at least a man-year.”

MICKE JOHANSSON
TECHNICAL DESIGN AUTHORITY
FUJITSU SWEDEN

Realize a Rapid Time to Value and Decrease Ongoing Costs

Realizing a rapid time to value is critical to smart business practices. And according to a 2004 survey conducted by IDC (*Quantifying the ROI Benefits of Integrated Systems Management*), on average, an organization can recoup its investment cost for LANDesk® Management Suite 8 in just 90.5 days and enjoy an average return on investment of 846% over three years.

LANDesk Management Suite makes realizing a rapid time to value and reducing ongoing costs possible by letting you automate routine tasks and perform those tasks with minimal impact on both your human and IT resources. You can get more done in less time and with less effort and infrastructure—and therefore, lower costs.

With enterprise scalability and LANDesk® Management Gateway, LANDesk Management Suite gives you the agility you need to cost-effectively manage users. LANDesk Management Gateway lets you manage and secure systems outside the firewall just like you manage those inside the firewall and with only an Internet connection. So you avoid the cost of a dedicated leased line or VPN infrastructure.

Protect Productivity

LANDesk® Management Suite lets you easily identify system vulnerabilities and quickly deploy applications or utilities to protect each computer in your environment—and the productivity of its user. You can also migrate users to new operating systems with automated OS deployment and profile migration tools, create policies to automatically install or remove software and quickly perpetuate those policies to maintain configuration standards.

Efficient, automated control over your IT environment helps your enterprise more easily adapt to new technologies and applications and respond more quickly to problems and threats. Knowing what you have and controlling how it's configured removes uncertainty and eases the pain of IT systems management.

You can make informed decisions on software purchases and upgrade and hardware replacement needs with powerful query tools that let you quickly analyze and understand your IT environment. And you can easily show your progress toward corporate objectives, demonstrate compliance with IT standards and plan for future enhancements with extensive business reports and a report designer.

It all works together, from a single console, to protect your productivity, increase efficiency, save time and reduce costs for your entire enterprise.

| Real-time, component-level performance monitoring and health maintenance for individual systems | | | | | | | ■ | |
| The ability to design, model, document, automate and optimize all your business processes and/or to execute workflows and automate processes for LANDesk® software distributions, patch management, vulnerability scans and software license monitoring | | | | | | | | ■ |

Note: LANDesk Management Suite includes the functionality of LANDesk® Inventory Manager and LANDesk® Handheld and Embedded Device Manager, either of which can be used alone or upgraded to LANDesk Management Suite's full capabilities. LANDesk Security Suite includes the functionality of LANDesk Patch Manager, which can be used alone or with LANDesk Management Suite or upgraded to LANDesk Security Suite's full capabilities. LANDesk Asset Manager and LANDesk System Manager can be added on to LANDesk Management Suite. LANDesk® Antivirus can be added on to LANDesk® Management Suite or LANDesk Security Suite.

Key Features

Enterprise Efficiency and Scalability

- Centrally manage tasks by automatically distributing tasks to each system's local core server.
- Reduce repetition by replicating public queries, packages and delivery methods across enterprise servers.
- Manage tasks and packages with grouping capabilities within console logs.
- Access intelligent, location-aware Dynamic Preferred Server for enterprise package distribution that offers functional load balancing and fault tolerance.
- Access performance up to 30% more efficient than other options and utilize between one and eight threads.
- Offload data collection and insertion to a non-core server for increased efficiency.
- Access support for Oracle Database 10g and Microsoft SQL 2005 among others.

LANDesk® Management Gateway

- Manage previously unreachable users across the Internet.
- Get a secure transport from your corporate environment to field-based or traveling laptops.
- Use patent-pending technology to gather data from up to 4,000 active connections at once.

Software License Monitoring

- Scan for known and unknown applications and define and track previously unknown applications.
- Keep unauthorized software from running—even on computers not connected to the network and even if end-users rename the file.
- See comprehensive software license use with application usage, license reporting and compliance reporting.

Software Distribution

- Access intelligent, location-aware distribution capabilities.
- Improve efficiency with a task-based model that separates package building and delivery method.
- Distribute large packages to multiple users with minimal bandwidth and without dedicated hardware or router reconfigurations.
- Use local bandwidth efficiency to access packages already delivered to a subnet.
- Install multiple packages in a single operation and automatically install prerequisite packages with prerequisite checking and package chaining.
- Easily select targets with a task scheduler that integrates with directory service and asset inventory databases.
- Deploy any package type with package-agnostic distribution and access multifile MSI support.

OS Deployment and Profile Migration

- More efficiently perform OS deployment and organize OS configurations with an efficient OS deployment tool.
- Provision "bare-metal" machines using PXE proxy technology.
- Capture user and application settings, desktop settings and user data with automated profile migration.
- Deploy disk images from any imaging tool.
- Automatically complete post-image configuration with automated SYSPREP.
- Automatically deploy applications.
- Access support for Windows PE and Linux PE for imaging up to three times faster than DOS-based imaging.

Remote Control

- Centralize management and increase performance with central, console-based control over role-based administration rights.
- Improve performance and prevent conflicts with an application-layer agent that hides when unused.
- Enable strong security with a secure, on-demand option in the LANDesk® Management Gateway.
- Increase efficiency with optimization for slow bandwidth conditions and dial-up connections.
- Perform maintenance and repairs any time with remote wake, remote reboot and remote application launch.
- Get rapid problem resolution and reporting along with a full audit trail using integrated chat, bidirectional file transfer and automatic session logging.
- Support anyone on the network from any computer with browser-based capability.

Inventory Management

- Access a scalable discovery process for real-time subnet-level tracking of unmanaged networked devices.
- Easily plan upgrades and respond to audits with detailed hardware and software inventories, custom data fields and software usage monitoring.
- Get a complete view with detailed asset tag and serial number information, embedded pointing device, fixed drive and CD-ROM data.
- Access a reporting dashboard and publish reports to a file share in HTML, PDF, DOC, RTF or XLS formats.
- Access inventory service performance that's up to 30% more efficient than other options and includes the option to utilize between one and eight threads.
- Offload data collection and insertion to a server other than the core for increased efficiency.
- Use bandwidth efficiently with automatic unmanaged device discovery, agentless inventory and delta inventory scans with compression.

Handheld, Embedded and Wireless Device Management

- Enjoy complete inventory management and asset discovery, monitoring and change control alerting for handheld, embedded and wireless devices.
- Access efficient software distribution with checkpoint and integrated task scheduling to define, schedule and automate software deployments.
- Get less bandwidth-intensive handheld, embedded and wireless device management with bandwidth throttling.
- Enjoy push and pull file transfer capabilities.

Intel Advanced Management Technology (AMT) Support

- Perform out-of-band discovery on Intel AMT-based hardware and software assets.
- Remotely heal systems regardless of OS or system state.
- Access Intel AMT Agent Presence to ensure agents are still present and active and System Defense that scans for viruses and worms and isolates or restricts infected machines.

Enterprise Control

- Agent watcher restarts a downed agent, restores a renamed agent to its original state and alerts your IT team if an end user removes or tampers with the agent.

System Requirements and Platform Support

For a complete list of core server and console requirements as well as operating systems; supported databases, directories, Web servers and reporting engines and for the most current language and client platform support, see the LANDesk Web site at www.landesk.com.
